Submersible Pumps India

There is a great need of submersible pumps in the industries and water supply projects. We offer a wide range of submersible pump sets and are famous for

the quality and service that we serve in all over India. These pumps come in various dimensions and materials according to the location of application.

Bore Hole submersible pump

A bore hole is a narrow hole that is bored into the ground to extract water or other liquid fluid like petroleum, oil, etc. from the ground. A special type of submersible pump is used to pump the substance effectively and speedily from the ground. The bore hole submersible pump are offered in various speed and power capacities to pump the substance.

UPVC Pipes for Water Supply

The UPVC pipe is made from unplasticized polyvinyl chloride that is suitable material for pumping high temperature substances. These pipes are also used in water supply as they have

excellent durability and anti corrosive properties. The UPVC pipes are non toxic and prevent bacteria growth in the pipes when the water continuously flows through the pipe.

Submersible Pump Sets for Irrigation

Irrigation is the process in which the plants are provided with the required amount of water at regular interval. We provide a large number of submersible pump sets for irrigation purpose and assure

that they are completely corrosion resistant. These sets come in various dimensions and specifications in order to provide client with choice in selection.

Stainless Steel Submersible Pump Sets

We are famous in the market for providing a wide range of stainless steel submersible pump sets that are used in various industries. They are made from high grade stainless steel material to increase their durability and avoid any kind of corrosion on the pumps. The stainless steel submersible pump sets are made using advanced technology and are leak proof as well as have great reliability and durability features. They are offered at the best competitive price.
